# GME

1. GME
2. CloudSat
3. Approaches
4. Sampling & sensitivity issues
4. Case 1
5. Summary case studies
6. Outlook

- global, hydrostatic forecast model
- vertical resolution: 40 hybrid level, up to 10 hPa
- horizontal resolution: ~40 km
- daily operational forecasts with hourly resolution
- 4 hydrometeor classes: QC, QI, QR, QS

## GMErouti

- QC, QI prognostic
- QR, QS diagnostic

## GMEexp

- all hydrometeor classes prognostic
- improved microphysical parameterizations: e.g., new size parameterization for snow, etc.

Source: DWD

# CloudSat CPR (Cloud Profiling Radar)

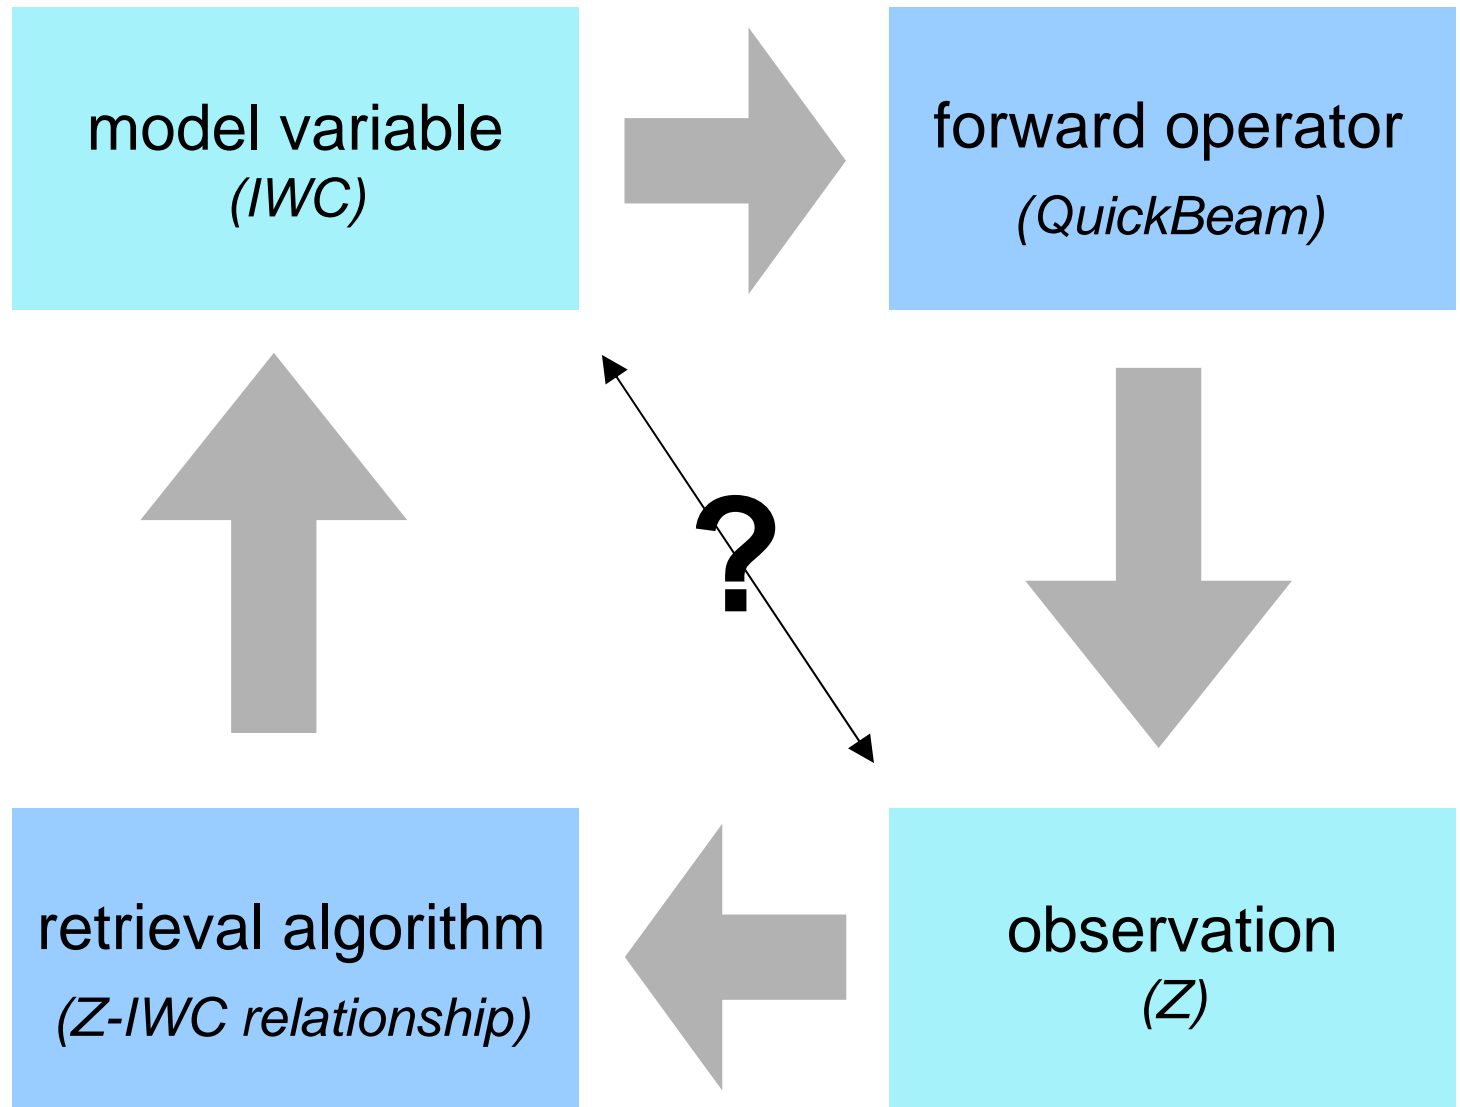

1. GME
2. CloudSat
3. Approaches
4. Sampling & sensitivity issues
4. Case 1
5. Summary case studies
6. Outlook

- operational since June 2006
- polar orbiting in ~705 km height (~1.5 h for 1 orbit)
- 94 GHz
- detection limit: -28 dBZ to 29 dBZ
- vertical resolution: 500 m, up to 30 km height
- horizontal resolution: 1.1 km
- footprint: 1.7 km along-track, 1.3 km across-track

# Two possible approaches

1. GME
2. CloudSat
3. Approaches
4. Sampling & sensitivity issues
4. Case 1
5. Summary case studies
6. Outlook

# Sampling & sensitivity issues

1. GME
2. CloudSat
3. Approaches
4. Sampling & sensitivity issues
4. Case 1
5. Summary case studies
6. Outlook

## resolution

- horizontal: GME interpolated to CloudSat track (nearest neighbour)
- vertical: GME and CloudSat interpolated to equidistant levels
- no temporal interpolation of the GME data:  
use x-h prediction of the 00 UTC run of the same day

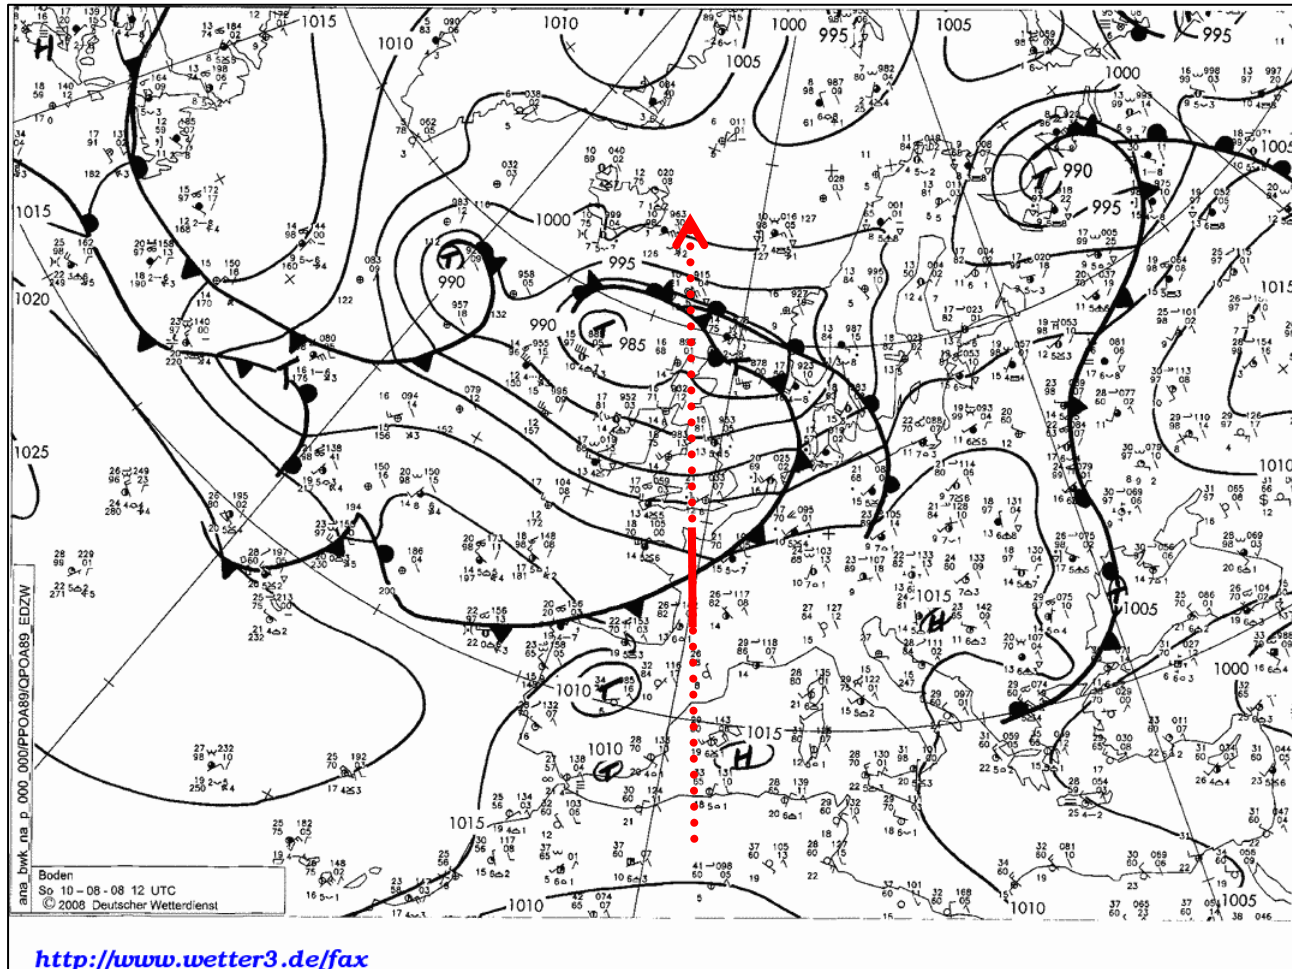

## sensitivity

- CloudSat detection limit: - 28 dBZ  $\rightarrow$  0.001 g m<sup>-3</sup>

# Summary & Outlook

1. GME
2. CloudSat
3. Approaches
4. Sampling & sensitivity issues
4. Case 1
5. Summary case studies
6. Outlook

## What's good about the new GME version?

- magnitude of the IWC values fits better to CloudSat
- position and extension of the clouds is recognized better

## What needs further improvement?

- frequency distribution of the simulated reflectivities is very narrow and lopsided
- cloud top often too high
- IWCs still too small

## To do:

- 11-d statistics!
- search for CloudSat error?

**Thank you for your attention!**
